

# eSales Analyst 2020.04.16 - Release Notes

---

## Major fixes / Improvements

- **After Charges** not working in create invoice.
- Fix: After adding **new 15 days business** the form closed, but link still remains
- **Rename** **Save** button to **Save & Print** In Create Invoice form.
- Implement feature -> **click and drags outside of dropdown menu button to expand menu but not collapse others**  
While, click on dropdown menu button to **open / close menu & close all others menus**
- **Right-To-Left layout** support for Urdu language e.g. everything will be right to left.
- Fix issues: On Logout from software, User's **working area lost**. Now user can freely logout from software and after login again user can starts from where he leave out
- Fix **navbar front-end** design e.g. fix alignment, padding & spacing w.r.t Urdu & English
- Fix **software version no. is different at different location**
- Change from **numeric to decimal number format** where necessary
- Change validation of decimal fields e.g. only allow numbers and dot (.)
- Fix front-end issue: **Auto list not refresh for search fields** after inserting records from add forms.
- Fix issue: After **restoring database**, user **have to close software** and then reopen software to use the restored data
- **Implement better report format** especially receipt for both Urdu and English invoice.
- Apply **same restrictions while editing records** as when adding new record
- Fix **category & sub-category are mandatory fields but not shows at front-end** in Add Product as \*.
- Make **all major reports** e.g. Product Details, Stock Details, Customer Details, Supplier Details, Accounts Payable, Cash In / Out Details, Bank Details, Bank Statement, Expenses Details, Staff Details,
- Implement **aria wise customer search** e.g. Customer Details, Account Receivable, Outstanding & Invoices Details
- Make **aria wise customer reports** -> Customer detail & Account Receivable
- Fix front-end error: User **entered data is lost when new customer is added** from add invoice form
- Rename database to **eSales Analyst Database** and internal to **eSales-Analyst**
- Set **focus outline border** to button, dropdown combo-box & date picker

## Breaking Changes

- **Previous database will not work in this version** (previous version are incompatible with this release)
- Previous **database backup will be incompatible with this new version**
- Temporarily **disable synchronization feature** for **online to offline / offline to online sync** (cutoff from Web POS)
- **Remove CNIC and Phone no. validation & inserting minus sign (-) automatically** due to some technical issues. Now anything can be written freely

## Minor fixes

- Fix: General Setting -> **Reset Password not clear out fields** after changing Password
- Fix: Add customer -> **tab order is not correct** e.g. last two
- Fix: Register form -> Reset button **not clear Reset password** field.
- After modifying setting and save **redirect to setting page** again
- Fix: When **create backup window opens** user should be unable to select Main window.
- Register form -> Save -> **\* fields can't be empty** message to **Following field can't be empty** and list all mandatory fields like in others forms.
- Dashboard -> Rename **Net Profit \ Loss** to **Net Profit / Loss**
- Navbar -> Rename **Cash In \ Out Details** to **Cash In / Out Details**
- Register form -> **Phone#** to **Phone No**
- Register form -> **Business Password** to **Password**
- Set **Create backup window** title to **Create Backup Data**
- Set **Restore backup window** title to **Restore Backup Data**
- Register form -> Rename **Business Name/Domain Name** to **Business Name / Domain Name**

## Known bugs / errors

---

- **Invoice return is not fully working**
- If database is locked (open in some other apps), **software hangs on Splash screen and no error shows** e.g. have to close the software manually using **Alt + F4** or from **Task Manager**
- **Software trial system not works correctly** e.g. When system date is increased and running software then software trial is expired permanently even if, date is reverted to local date latter
- **Multi search criteria not works properly** e.g. when Area is entered, search by date have no effects & when phone no is there area have no effects etc.

## Known limitation

---

- **Search is currently case sensitive** e.g. **Customer** and **customer** are two different words
- **Partial words search is still not available** e.g. User have to type whole word / Search will be w.r.t whole word
- **Software can't be pin to taskbar** as quick shortcut

## Others

---

- Windows shows as **unrecognized app** when running setup file & user have to click **Run anyway** by clicking **More info**.
